

II. The Specification

Please replace page 3 of the specification with the attached new clean copy.

No new matter is added.

network, the user must find the telephone socket to connect the user terminal to the network. Further, the user terminal must be equipped with the appropriate kind of network capability. For example, if the user terminal is connected with a telephone network, the user terminal must be equipped with a modem. A user terminal without  
5 a modem cannot function when connected to a telephone network. If the user terminal is connected with a LAN (local area network) network, the user terminal must be equipped with a LAN card. A user terminal without a LAN card cannot function when connected to a LAN network.

Thus, there exists a need for an arrangement that allows a user to access the  
10 Internet everywhere without carrying the computer user terminal and its peripheral devices.
